DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, drawn to an apparatus, classified in class 425.
 - II. Claim 10, drawn to an article, classified in class 428.
 - III. Claims 7-9, drawn to a method, classified in class 164.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus can be used to make plastic article.
- 3. Inventions II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the article can be made by injection molding.
- 4. Inventions I and II are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and

Application/Control Number: 10/659,305 Page 3

Art Unit: 1725

materially different apparatus (MPEP § 806.05(g)). In this case the product can be made by an injection molding apparatus.

- 5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and III, restriction for examination purposes as indicated is proper.
- 6. During a telephone conversation with Mr. James Oliff on June 16, 2004 a provisional election was made with traverse to prosecute the invention of group III, claims 7-9. Affirmation of this election must be made by applicant in replying to this Office action. Claims 1-6 and 10 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.
- 7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Rejections - 35 USC § 102

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Application/Control Number: 10/659,305

Art Unit: 1725

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

9. Claims 7-9 are rejected under 35 U.S.C. 102(b) as being anticipated by (JP 07-276035) (IDS submitted by applicant).

As to claim 7, JP '035 discloses a method for manufacturing a metal-composite member comprising the steps of:

Placing a ceramic member (2) in a mold member (6);

pouring molten metal (1) to be joined into the mold member (6) so as to bring the molten metal into contact with the surface of the ceramic member;

cooling and solidifying the molten metal to join the metal onto the surface of the ceramic member by a direct joining strength of the ceramic and the metal on an interface therebetween,

wherein the molten metal to be joined is poured while the mold member is passing through a passage member extending along a plurality of process regions, practically in a shielded state from the atmosphere [(figure 1) (abstract), (page 2, [0008]), (page 4, [0015]) and (last line of page 4)].

As to claim 8, the solidification is made to progress in one direction when the molten metal is cooled and solidified as shown in figure 1.

As to claim 9, wherein the metal is aluminum (page 1, claim 6) and the ceramic member is a carbide (page 1, claim 6).

Inquiry

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Len Tran whose telephone number is (571) 272-1184. The

examiner can normally be reached on M-F, 8:30 - 5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Dunn can be reached on (571) 272-1171. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
